

EDUCATION PATHWAY

# Network Security

## Training Institute

The purpose of Education Pathways is to create a career map through Fortinet's Training Institute learning, allowing individuals to navigate their educational journey from curriculum to careers. This education pathway focuses on Network Security and the potential job opportunities that exist around the technology.

## Network Security

Network security refers to the technologies and policies used to defend any network, network traffic, and network-accessible assets from cyberattacks, unauthorized access, and data loss. It must protect at both the edge and inside the network, with a layered approach.

Networks are continually growing and evolving, and new technologies increase the attack surface and open the door to new threats. At the same time, cyber criminals are launching increasingly sophisticated attacks. The following are common challenges to securing networks:

- Network performance slowdowns
- Sophisticated, targeted attacks
- Lack of visibility into the entire network
- Complexity: too many disparate products
- Shortage of IT professionals

## Workforce Framework for Cybersecurity (NICE Framework)

The National Initiative for Cybersecurity Education (NICE) Workforce Framework for Cybersecurity (NICE Framework), published by the National Institute of Standards and Technology (NIST) in NIST Special Publication 800-181, is a nationally focused resource that establishes a common lexicon to describe cybersecurity work, and workers, regardless of where, or for whom, the work is performed.

## NICE Framework—Work Roles

Work Roles act as the most detailed groupings of cybersecurity work comprised of specific knowledge, skills, and abilities (KSAs) required to perform tasks. Work Roles are not specific job titles.

**Fortinet Training Institute courses and exams for the Network Security education pathway align to the following NICE Framework Work Roles. All candidates should also complete the Cybersecurity Security Fundamentals courses and the FortiGate Operator course.**
