HTTP Request Methods

GET

The GET method is the most common of all these request methods.

It is used to fetch the desired resources from the server.

The POST method is used to submit the information to the server.

As we're submitting data, the POST method often changes the state of the server.

POST

PUT

The PUT method is used whenever you need to change the resource. The resource, which is already a part of resource collection.

The PATCH request method is used to modify only the necessary part of the data or response.

The PATCH method doesn't modify the entire response.

PATCH

DELETE

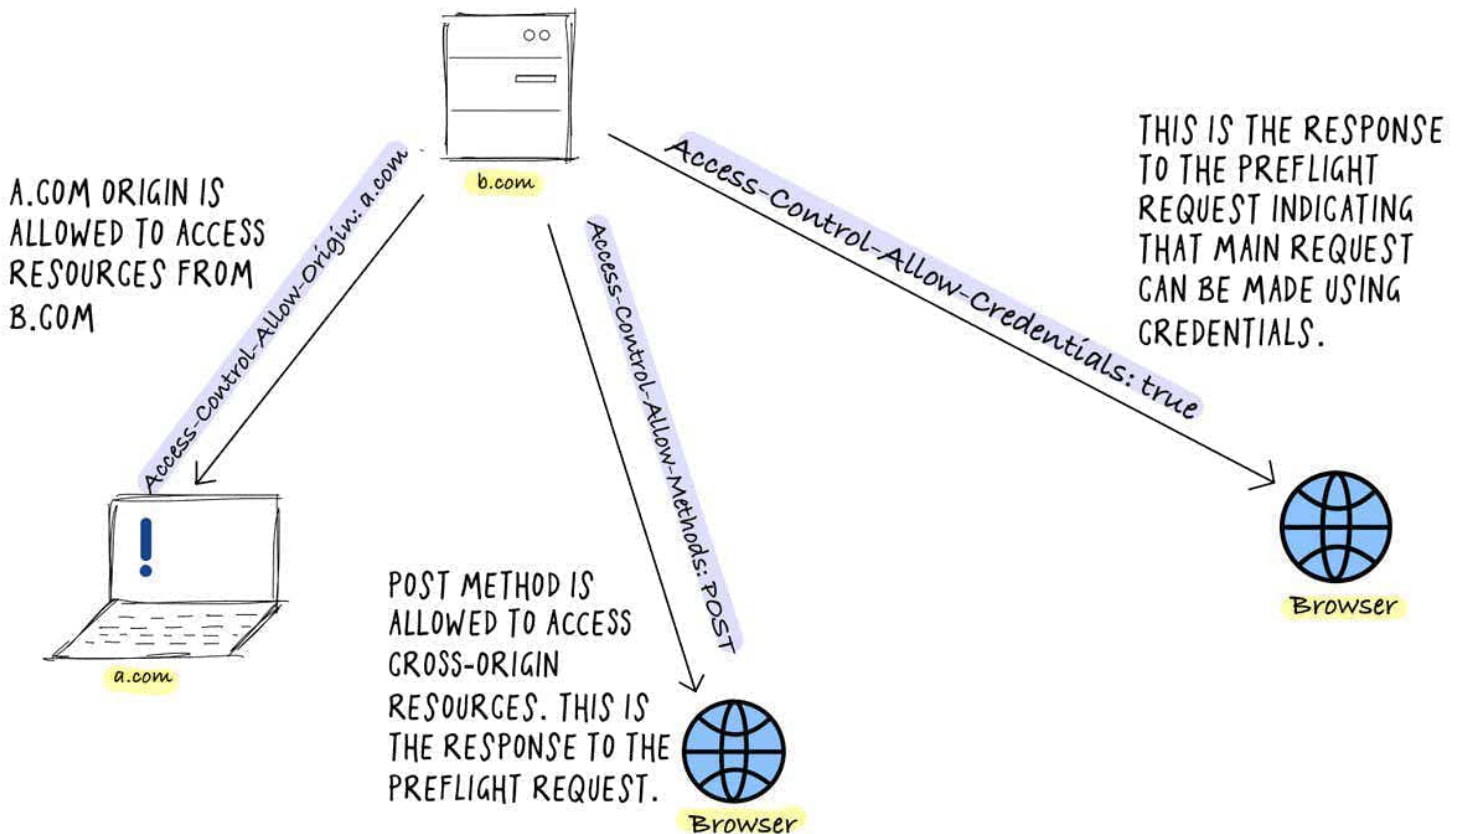

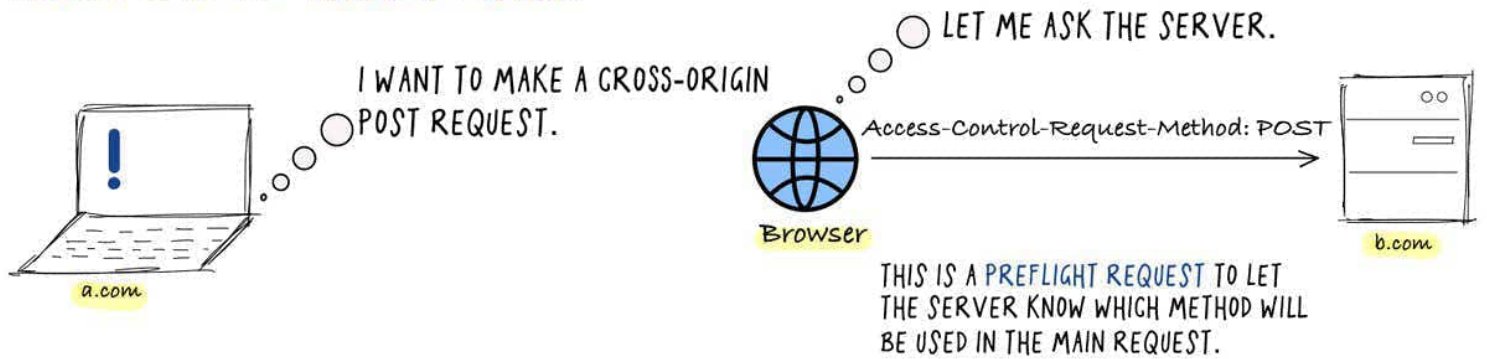

As the name says, the DELETE request method is used to delete the specified resource. It requests that the origin server delete the resource identified by the Request-URL.
